

MATERIAL SAFETY DATA

Materials:

Products supplied by Studworks are manufactured from zinc coated steel coil material which is classified as a non-hazardous material. Products have limited corrosion protection which can be compromised in corrosive conditions such as acid and salt spray. If the products are to be used in such conditions, it is recommended that you contact Studworks for further information.

Handling and Storage:

Products are supplied in pack and sub-pack quantities and should be handled in accordance with the recommendations contained in AS 1470 - Health and Safety at Work Principles and Practices. Where mechanical lifting or moving is required, trained and licensed operators are to be used. Products should be stored in an environmentally friendly area away from airborne contaminants such as acid and salt spray.

Safety:

It is our recommendation that protective clothing should be worn when handling products in accordance with the recommendations contained in AS 2161 - Occupational Protective Gloves, and that they should be checked regularly for damage. It is recommended that protective goggles should be worn when handling products in accordance with the recommendations contained in AS 1336 - Eye and Face Protection. People with sensitive skin conditions should seek medical advice before prolonged handling of products. Hands should be washed before eating and for personal hygiene.

Site Training:

It is the responsibility of the contractor to ensure that their employees are trained in all onsite occupational, health and safety procedures as these procedures can vary from site to site.

Flammability:

Products are non-flammable.
